

與規管網約車服務有關的4項附屬法例小組委員會

AU Jason先生於2026年6月9日提交的意見書

以現在網約車司機嘅數量或供應量來計算，每逢繁忙時間或在惡劣天氣情況下，很多時間已經不足夠應付市民嘅需求，要等頗長時間，或者已經找不到司機。強烈建議政府在各網約車平台蒐集這方面嘅真實嘅數據。

若果將來只有更少網約車司機，這一定會帶來對市民非常之不便，尤其對行動不便嘅人士，例如孕婦、老人家、傷殘人士等等。

中國大陸很多城市都已經有成功及完善嘅網約車法例和監管方法，強烈建議香港政府先參考這些城市嘅做法，然後再去立法監管香港網約車司機嘅數量。

與規管網約車服務有關的4項附屬法例小組委員會

黃亨利先生於2026年6月9日提交的意見書

根本不應限制網約車牌照上限，望約車的出現，原意就是增加市場競爭，令服務更加進步。設牌照上限，根本就是本末倒置，重蹈的士牌照的覆轍。

與規管網約車服務有關的4項附屬法例小組委員會

PANG Alex先生於2026年6月9日提交的意見書

規管的應該是道路試用安全。

而不是數量。

本身網約車已經有比的士更完善的制度，既不能選擇目的地，又不能濫收費，表現差的自然被排斥(無論司機還是乘客也是)。這些完全將的士行業行比下去。

綜觀香港和日本的士業對比，未盲的也知道高下，連盲得也分得出車輛保養質素和司機駕駛技術。香港的士唔識路，兜路，唔過海，揀客拒載，近又唔去遠又唔去最好翻屋企先去，又一路揸一路食煙，手車又屎。

香港成就於自由經濟，supply應該由demand來決定。

如果網約車沒有競爭力，人們自然選擇坐錢七的士。

可以斷定，問題根本不是出在網約車，而是香港的士業實在太不堪。

司機操守和技術、車輛保養維護、行業內部剝削，真正需要糾正和整頓的應該是士業。

而不是反過來壓制惠及人民的服務和產品。更應該進一步幫助網約車正規運作，例如保險業界應該推出網約車專用的行車保險。

煩請高管和每個月入十多萬的議員醒一醒，繼續維護既有利益者，也不是長治久安的做法。

與規管網約車服務有關的4項附屬法例小組委員會

何潤雄先生於2026年6月9日提交的意見書

強烈支持網約車，1萬部實在不足夠，應該不限數量，積極不干擾政策，等待市場自然調節數量。的士唔會考慮乘搭，大部分司機冇禮貌，態度不佳，特別短途情況。

與規管網約車服務有關的4項附屬法例小組委員會

KUNG Margaret於2026年6月9日提交的意見書

Uber provides an excellent alternative to taxi. Taxi drivers in Hong Kong has the worst service of transportation. They have attitude problems, and too many of the drivers are too old to be in the trade. This has been an ongoing issue for the past 40 years

Only recently there has been a slight improvement after Uber was introduced to the market. The current planned allotment of 10000 for Uber drivers is insufficient for the market. I urge that the number increase to at least 25000. I do not want to revert back to the days where one has to put up with the rudeness, dishonesty and price gouging of these taxi drivers. The market competition to survive and improve. Major cities in Mainland provide taxis and various car hailing service. Let the consumers have more choices. This the survival of the fittest theory. The taxi drivers should clean up their act and stop whining. Why more consumers prefer Uber is for the better service quality they offer. The root of the problem is with the Taxis. No point in asking the government to step in when they are not ready to make any improvements

與規管網約車服務有關的4項附屬法例小組委員會

郭芝芝於2026年6月9日提交的意見書

本人近年對 市區的士體驗 多次感到失望， 除了 司機態度惡劣， 凌晨時分 和 某些地點 出現 全線冚旗， 揀乘客， 及私下加價， 就連 平台約車也內付30蚊小費， 要 加小費才接單， 的士已經每年加價， 但越來越差，

反而uber 所有都完善， 沒有 體驗過 爭吵成分， 懇請政府 重視 及增加 Uber 網約車加入的權利， 方便市民， 謝謝

與規管網約車服務有關的4項附屬法例小組委員會

CONCERNED Citizen先生於2026年6月9日提交的意見書

Dear Chairman and Members of the Subcommittee,

I am writing as a regular commuter and frequent user of ride-hailing services in Hong Kong to express my strong opposition to the proposed subsidiary regulations. Restricting ride-hailing vehicle permits to a strict quota of 10,000 via a lottery system will not only harm consumers through higher prices and longer wait times, but it will also force citizens back into relying on a traditional taxi ecosystem that suffers from severe safety, quality, and accountability issues.

While I support the government's intention to regulate the industry, the current proposal protects an outdated monopoly at the expense of passenger safety and Hong Kong's international reputation.

1. Severe Safety and Accountability Deficits in Traditional Taxis

The fundamental advantage of ride-hailing platforms like Uber is the digital footprint—every trip, driver, and vehicle is tracked via GPS in real-time. Traditional taxis completely lack this level of accountability, leading to serious safety risks for passengers:

Criminal Behavior and Lack of Redress: Because traditional taxi trips are often anonymous, passengers have little recourse when facing rogue drivers. I know of egregious firsthand accounts where local cab drivers, alongside accomplices, have attempted to physically assault and rob passengers. In a ride-hailing vehicle, the driver's identity, location, and route are permanently recorded and shareable with family or police, acting as a powerful deterrent against crime.

No Reliable Way to Recover Lost Property: Traditional taxis lack a centralized, digital system for lost items. When passengers accidentally leave their belongings behind in a local cab, they are almost never recovered. Ride-hailing apps allow

passengers to contact the driver immediately and trace the exact vehicle, safeguarding consumer property.

2. Dangerous Driving Habits Endangering Vulnerable Commuters

The driving behavior of many traditional taxi drivers poses a direct physical hazard to Hong Kong residents, particularly vulnerable groups like the elderly.

Erratic lane-changing, sudden braking, and aggressive, sporadic driving are rampant in the traditional taxi industry.

I have seen how this dangerous driving directly jeopardizes the safety and physical well-being of elderly passengers, such as my friends' grandparents, who require a smooth and stable commute. Ride-hailing platforms utilize star-rating systems and telematics to actively monitor and weed out dangerous drivers, ensuring a significantly safer ride.

3. Substandard Vehicle Quality Damaging Hong Kong's Image

Hong Kong prides itself on being a world-class financial hub and a "Smart City." However, the general vehicle quality of the local taxi fleet is noticeably poor, with aging, poorly maintained, and unclean cars dominating the roads.

Forcing tourists and residents to rely on a subpar taxi fleet actively degrades the image of Hong Kong.

Ride-hailing services consistently offer higher-quality, cleaner, and more modern vehicles, reflecting the standards that a global city should maintain.

4. Economic and Operational Flaws of the Current Proposal

In addition to safety concerns, the mechanical aspects of the proposal are highly flawed:

The 10,000-Permit Cap: A hard quota ignores market reality, ensuring that passenger demand will vastly outstrip supply during peak hours, bad weather, and holidays, leading to skyrocketing surge prices.

The Lottery-Based System: Allocating permits by luck rather than merit or safety records completely disincentivizes service quality.

Conclusion and Recommendations

Hong Kong citizens deserve the right to choose transport options that prioritize their personal safety, physical comfort, and digital accountability. By capping ride-hailing permits, the government is effectively trapping commuters in a market with fewer safe choices.

I urge the Subcommittee to:

Ditch the rigid 10,000 quota and lottery system in favor of an open, demand-led licensing framework.

Prioritize passenger safety by legalizing a robust ride-hailing market that holds drivers accountable through modern technology.

Thank you for your time and consideration of the views of Hong Kong commuters.

Concerned Citizen

與規管網約車服務有關的4項附屬法例小組委員會

鄭國鏢先生於2026年6月9日提交的意見書

政府首階段發上限一萬個網約車牌照，我認為不合理，且有違網約車善用閒置資源的概念。

網約車的好處勢是利用閒置資源，司機用不著私家車或沒其他用途時，可駕駛網約車，不一定會每天定時開工。

我認為不應為網約車牌照數量設置上限。任何申請人只要合乎條件就可發牌。

現時網約車沒有數量上限，但整體交通及日常出行大致正常。

與規管網約車服務有關的4項附屬法例小組委員會

張德銓先生於2026年6月9日提交的意見書

I would support granting a much higher quota to rideservice providers such as Uber. The fact is that the traditional Hong Kong taxi industry has failed the general public for many years through consistently poor service standards, including unprofessional driver manners, poorly maintained vehicles, frequent refusals of service, and a lack of accountability. Even today, if you randomly take a taxi, there is still a high chance you will get into one of these poorly maintained vehicles rather than a clean, comfortable, and safe car. In addition, cashless transactions are now a basic expectation in a modern international city, and if not for the competitive pressure from Uber and similar platforms, the taxi industry would never have moved toward offering such options to its customers. I sincerely urge the Legislative Council to consider the longterm benefit for the general public over dated laws and regulations that have, for too long, primarily protected the taxi industry instead of passengers.

Thank You.

鍾鳴先生於2026年6月9日提交的意見書

我認為網約車牌照，最起碼要發行三萬個，否則只會減低約車的經驗，和令到價格搶高，對出行的體驗很差。

與規管網約車服務有關的4項附屬法例小組委員會

YEP Srisuda女士於2026年6月9日提交的意見書

There should be no quota for ride hailing. It will cost longer wait time and increase in price.

與規管網約車服務有關的4項附屬法例小組委員會

蘇鍵鋒先生於2026年6月9日提交的意見書

本人認為應提升網約車司機的名額，讓網約車服務維持合理價格水平。有些圍村、鄉郊地方想call的士也沒有車會接單，回國內遊行也是用網約車，香港應該與時並進！

就規管網約車服務相關附屬法例提交意見書

致：與規管網約車服務有關的4項附屬法例小組委員會

提交人：甘澤森

電話：[REDACTED]

電郵：[REDACTED]

地址：[REDACTED]

本人現就規管網約車服務的相關附屬法例提交以下意見，供小組委員會參考。本人支持政府為網約車服務建立清晰、合法及安全的規管框架，但認為有關制度必須尊重市場實際運作，避免以過度限制的方式削弱網約車服務本身的價值，最終令乘客、司機以至整體交通服務選擇受損。

一、發牌數量不應設上限，應由市場需求決定

本人認為，網約車服務的牌照數量不應由政府預先設定硬性上限。交通服務的供求應由市場需求、乘客選擇、司機參與意欲及平台實際營運數據自然調節，而非由政府以行政方式決定一個固定數字。若政府在制度初期便將牌照數量限制於過低水平，將會直接扭曲市場供求，令服務供應不足、乘客等候時間增加，亦削弱網約車作為補充公共交通及的士服務的功能。

二、政府應正視 Uber

已在香港運作多年的事實，並以現有數據制定政策

Uber 等網約車平台已在香港運作多年，市場上已累積大量真實使用數據，包括活躍司機數目、乘客需求、繁忙時段、地區分布、等候時間及服務模式等。政府在制定規管策略時，不應忽略這個既成事實，亦不應假設網約車是一項完全未曾出現的新服務。相反，政府應充分運用現有市場數據，制定更貼近實際情況的制度，而不是以抽象推算或過度保守的假設作為主要依據。

三、合法化不會令車輛數目突然大幅增加

正因 Uber 已在香港運行多年，合法化後並不代表市場會突然出現大量全新車輛投入網約車服務。現時已有相當數目的司機以兼職或靈活方式參與，規管制度只是將既有市場納入合法框架，而非由零開始創造一個全新市場。因此，政府不應以「合法化後會即時大幅增加車輛」作為過度限制牌照數量的理由。更合理的做法，是在合法化後持續監察市場數據，再按實際情況調整制度。

四、一萬個牌照上限將嚴重削弱共享經濟的靈活性

據 Uber 所稱，現時香港活躍司機超過三萬人。若最終只容許約一萬名司機取得牌照，即代表大量現有司機將被排除於制度之外，服務供應亦會大幅下降。網約車及共享經濟的核心價值，正正在於靈活參與：司機可以在工餘時間、空閒時段或有需要幫補收入時上線接單，而非必須以全職形式長時間工作。若政府一方面將牌照數量大幅壓縮至現時活躍司機的約三分之一，另一方面又以規則要求司機必須上線達到某些時數才可保留牌照，實際上就是嚴重削弱共享經濟模式的優勢，將原本靈活的兼職平台變成近似傳統全職營運模式。

五、以「每名司機每星期最少工作三十小時」推算供應量並不合理

政府若以一萬名司機、每名司機每星期至少工作三十小時作為計算基礎，本人認為這是錯誤及不切實際的假設。很多人選擇成為 Uber 司機，正正是因為其工作模式具彈性，可以按個人時間、家庭需要、正職安排及收入需要而決定是否上線。大部分兼職司機未必會、亦未必能夠每星期固定工作三十小時以上。若牌照數量只按這種近似全職工作模式計算，實際供應將很可能不足以應付市場需要。結果是乘客等候時間大幅延長、繁忙時段更難叫車、服務可靠性下降，市民自然會減少使用，最終甚至令網約車平台逐步失去在香港市場營運的空間。

六、過度規管會同時損害乘客選擇及司機收入來源

現時不少市民依靠 Uber 等網約車平台作為靈活收入來源，以幫補生計或應付生活開支。若政府以過低牌照上限或過度嚴格的營運要求，變相抹煞網約車服務的生存空間，最後受影響的並不只是平台公司，而是廣大市民。乘客會失去更多出行選擇，特別是在繁忙時段、偏遠地區、攜帶行李、家庭出行或需要較穩定服務時，選擇將會減少；司機亦會失去一個相對靈活的收入來源。政府的政策目標應該是在安全、保險、責任及透明度方面作出合理規管，而不是以限制供應的方式保護既有市場結構。

七、建議

本人建議小組委員會及政府重新考慮牌照上限及相關工作時數要求，避免以固定及過低的數字限制市場發展。較合理的方向，是先建立基本安全、保險、車輛及司機資格要求，讓合資格司機均可申請牌照；其後再按實際營運數據、投訴數字、道路使用情況及乘客需求作定期檢討。如此既可保障乘客安全及服務質素，亦可保留網約車共享經濟的靈活性，令香港市民有更多元、有效率及符合現代需要的出行選擇。

謹此提交，敬請小組委員會考慮。

提交人：甘澤森

本人認為網約車發牌名額應該與的士牌數目一樣，這才是公平競爭！事實係市民對網約車需求已比的士大！

與規管網約車服務有關的4項附屬法例小組委員會

MAK Sarah於2026年6月9日提交的意見書

I disagree with the quota of 10,000 as that limits the number of available app hailing rides available, and will increase my wait times and cause rates to increase. The government should leave the number to the actual demand and supply of the society and not interfere.

與規管網約車服務有關的4項附屬法例小組委員會

BUTT Bailly於2026年6月9日提交的意見書

Ride Hailing should be control on a business level, not driver level.

Most new innovative ideas rest on sharing and leisure. It is hard if not unfriendly to control on a driver level.

On a business level, depending on their efficiency, willingness to resolve Hong Kong needs, can be assigned with certain level of active driver at specific time and day.

For example, during rush hours or holiday the Ride Hailing can be allowed with over 50,000 active driver. The more a business is willing to fulfill this with original or close to original price can be assigned with more quotas

與規管網約車服務有關的4項附屬法例小組委員會

陳家杰先生於2026年6月9日提交的意見書

我支持香港立法規管網約車，並認為在合規前提下，網約車在多方面可比的士更好，尤其在效率、安全與用戶體驗上能帶來提升。

首先，網約車的服務流程更透明、可追蹤。乘客通常可在出發前清楚掌握司機與車輛資訊、車牌號碼、接駁與行程時間等，行程亦有平台記錄。相比之下，的士雖然同樣有車牌與司機身份，但在叫車方式與資訊透明度上，往往較依賴現場與個別經驗。當制度要求平台提供可追溯紀錄並強化事故責任時，網約車的安全管理會更容易落實與監督。

其次，網約車在接駁效率與減少空跑方面更具優勢。平台可根據地點與需求提供叫車匹配，減少在路邊等待、也降低無目的行駛。這不但提升乘客體驗，也能在一定程度上減少路面浪費，讓整體交通運作更有效率。

第三，網約車的使用更符合多元需求。香港不同時段、不同地點對運輸的需求差異大，例如深夜、偏遠地區或繁忙時段。網約車透過電子化叫車與即時匹配，通常能更快提供服務，讓乘客在可預期的時間內出行。若立法要求清晰定價或透明收費機制，乘客就能更容易比較與理解車費，減少爭議。

第四，競爭可以推動整體服務質素提升。當網約車納入制度管理，符合條件的營運者會被要求遵守安全、保險、培訓與服務標準。這種「有規範的競爭」可促使的士服務在車況、守時、處理投訴等方面持續改善，而不是把資源浪費在灰色地帶的拉扯。

當然，前提是立法必須做得好：包括司機與車輛准入、保險責任、紀錄保存、投訴處理、打擊無牌與危險行為，以及合理的上落客與營運規範。只要規管到位，網約車就能在安全透明、叫車效率與整體體驗上勝過目前多依賴現場叫車的士，成為香港更值得推廣的交通選擇。

與規管網約車服務有關的4項附屬法例小組委員會

何卉小姐於2026年6月9日提交的意見書

I am writing to object to the proposed subsidiary legislation that limits the number of ride-hailing vehicle permits to 10,000. As an ordinary citizen who relies on ride-hailing services for daily commuting, I believe this cap is detached from public needs and will make traveling in Hong Kong significantly harder. Please consider the following daily realities faced by passengers: It is already too hard to catch a ride: During morning and evening rush hours, finding a taxi or a ride-hailing car is already a daily struggle. We are routinely met with "no cars available" screens or endless waiting times. Exorbitant peak-hour fares: Because demand vastly outstrips supply during peak periods, the surge pricing is already incredibly high. Cutting the current number of active drivers down to a strict 10,000 limit will only make cars scarcer and push surge fares to an absolute extreme. Part-time drivers keep the city moving: The government expects 10,000 cars to handle all demand, but most ride-hailing drivers are part-time workers who only log on when they are free or during peak hours. A cap on the number of permits means we lose the very flexibility that makes ride-hailing work in the first place. Lack of transport alternatives: Traditional taxis alone cannot meet the massive public demand during peak periods or in specific districts. We need more cars on the road during rush hours, not fewer. Public transport policy should prioritize the convenience and pockets of the general public. Imposing a 10,000 cap will hurt ordinary commuters the most. I strongly request the government to remove or substantially increase this limit to protect our right to commute efficiently.

LUK Larry於2026年6月10日提交的意見書

希望可增加網約車牌照至最少20000個，現時已經經常叫車很慢及截不到的士，如網約車牌照減至10000個肯定會影響日常出行

與規管網約車服務有關的4項附屬法例小組委員會

李雪雲女士於2026年6月9日提交的意見書

我支持香港立法規管網約車，因為立法的目的不是簡單地放行或限制，而是把這類新型出行服務納入清晰、可執行的制度之中，讓乘客得到更安全、更可靠、也更透明的體驗。

首先，網約車涉及載客運輸，安全是最核心的前提。透過立法，可以要求司機與車輛必須符合基本準入條件，例如身份核實、必要培訓、車輛檢查以及保險安排；同時，制度亦能強化責任追溯機制。當發生事故或爭議時，若有完整行程紀錄與可查核的資料，處理就會更有效率，乘客的安全感也會更高。相比只依靠臨場接觸與個別經驗的安排，合規後的網約車能把風險控制在更可管的範圍內。

其次，網約車的服務模式能提升出行效率，減少乘客不必要的等待。香港不同時段的交通需求差異很大，繁忙時段或特殊天氣下，叫車體驗往往不穩定。平台化的即時配對通常能更快找到合適的車輛，令乘客更容易預先安排時間；同時，若規管配套到位，也能在一定程度上減少無目的空跑，讓路面資源更有效運用。對市民而言，這不只是「方便」而是直接影響到通勤效率與生活節奏。

再者，立法能推動收費與服務透明化，減少不必要的爭拗。當規則清楚規定收費計算方法、必要費用處理與資訊披露，乘客就能更容易理解車資並作出選擇；而有紀錄可查的制度安排，也能讓投訴與查核更有依據。這種透明度，能夠降低臨場臆測與衝突，讓互動更有秩序。

此外，網約車對多元出行需求更具彈性。香港雖然公共交通網絡完善，但在深夜時段、較偏遠地點，或需要即時到達目的地、攜帶行李等情況，傳統交通模式未必總能提供同樣便利。網約車在合規前提下能補足這些「最後一段」的需求，使出行選擇更貼近市民日常生活的真實需要。

最後，立法規管有助建立更公平、可持續的競爭環境。當網約車被納入制度管理，守規者能在清晰標準下營運，而不合規者則能被更有效地打擊，從而

避免灰色地帶造成的混亂。長遠而言，制度化的競爭會促使服務質素提升，例如車況與守時、客戶服務水平、以及對投訴的回應效率，最終受益的仍是廣大乘客。

總結來說，我支持香港立法規管網約車，主張的核心是安全為先、透明為原則、可執行為底線。只要制度設計到位，包括準入與保險、紀錄保存、執法與收費透明等配套，網約車就能成為香港更可靠、更有效率的交通補充，讓市民出行更安心也更方便。

與規管網約車服務有關的4項附屬法例小組委員會

吳錦龍於2026年6月9日提交的意見書

不贊同發牌上限，因為 這跟共享經濟嘅原意善用閒置資源嘅初衷完全違背。好似我呢啲平時。每日可能開兩三個鍾，幫補家計亦都善用。志願嘅人來講到漢。這樣子立法同限制發牌數量。不，但不能幫助改善任何情況。反而增加經濟壓力，立法嘅原意應該係令到社會更好更和諧，而唔係本末倒置。

To: Members of the Subcommittee on Subsidiary Legislation Relating to Ride-Hailing Services,

I am writing to you as a Hong Kong resident to share my views on the recently proposed subsidiary regulations for ride-hailing services. While I support establishing a clear regulatory framework for the industry, I strongly oppose the proposed strict quota of 10,000 vehicle permits.

As a citizen who regularly relies on ride-hailing platforms like Uber, I am deeply concerned that implementing such a severe cap on supply will negatively impact the daily lives of Hong Kongers in several ways:

Higher Costs for Citizens: A strict quota will artificially restrict the supply of available vehicles. Basic economics dictates that when demand remains high but supply is capped, prices will surge. Everyday citizens should not have to bear the burden of inflated transportation costs just to get around their own city.

Longer Wait Times: One of the primary reasons ride-hailing is so highly valued in Hong Kong is its efficiency and reliability. Limiting the number of vehicles to 10,000 will inevitably lead to driver shortages, especially during peak hours or poor weather, resulting in unacceptably long wait times.

Loss of Premium Service and Comfort: Many residents, including myself, actively choose Uber because it consistently provides a comfortable, high-quality, and premium riding experience. Constraining the market limits our choices as consumers and removes the competitive incentive that keeps service standards high.

Ride-hailing has modernized how we travel, offering a level of comfort and convenience that the public greatly appreciates. Implementing a hard cap and a lottery-based allocation system feels like a step backward for a world-class city like Hong Kong.

I urge the Legislative Council to reconsider the 10,000 vehicle quota. Please adopt a more flexible, market-driven approach that prioritizes consumer choice, keeps ride costs affordable, and ensures wait times remain short.

Thank you for your time and for considering the voice of the commuting public.

Sincerely,

Johnson Chow

與規管網約車服務有關的4項附屬法例小組委員會

偉邦劉先生於2026年6月9日提交的意見書

Currently we have over 30,000 ride-hailing drivers operating in HK. I have seen no logical reason to reduce that number to a third (10,000 quotas). I believe the government should not balance the interests of different stakeholders (because that could be sacrificing the public interests and benefiting certain stakeholders e.g. Taxi owners) but focus on the actual needs of Hong Kong and citizens. There are no benefits to the citizens in reducing the number of available drivers to 1/3 of the current strength.

Also depends on the vetting of the license application, if we allocate the license in random, how do we prevent the taxi unions to hog all the licenses? Is that a really 'fair' system, or is it better to allocate all 30,000+ licenses to all current drivers and then the government can control/manage the future growth through licensing.

Why break the status quo and create transportation problems?

與規管網約車服務有關的4項附屬法例小組委員會

TANG Tze-hong先生於2026年6月9日提交的意見書

The arbitrarily set limit of 10,000 ride hailing licenses is an embarrassing disappointment for HK for various reasons:

*it undermines any credibility that HK claims to be forward thinking and innovative (compare and contrast Singapore's highly supportive environment in setting up ride hailing with the appropriate infrastructure (eg Changi airport infrastructure v HKIA's) compared to HK's stop start grudging approach)

*it panders to vested interests that are themselves not keen to evolve and clearly wish to protect services that fail to satisfy the travelling public (ie current taxi licensing is an aging system that serves to protect certain commercial interests rather than promote the service that is meant to be provided)

*it seemingly does not provide for a mechanism for revision (at least this has not been mentioned)

*a more meaningful way to address numbers may have been to set certain requirements/standards that need to be met by licensees so that ride hailing can be grown in a controlled organic fashion rather than an arbitrary limit on licenses granted

*an arbitrary limit suggests that the authorities haven't done their homework on the scale of ride hailing (despite the inordinate amount of time that has already passed since ride hailing was available) and its success to date and the reasons for its popularity compared to traditional services

*if control of numbers is an aim there are - see above - more meaningful ways of doing so which also help to address standards and suitability of those seeking to provide such services

與規管網約車服務有關的4項附屬法例小組委員會

梁耀輝先生於2026年6月9日提交的意見書

促請政府審慎考慮網約車牌照政策，保障的士業界合理權益政府十多年來對非法「白牌車」監管嚴重不力，管理制度充滿漏洞，警方打擊行動亦流於表面，未能根治問題。這種長期的不作為，直接導致廣大的士車主與投資者蒙受巨大的經濟損失。不容忽視的是，這些投資者當初全都是拿出真金白銀、依法合規地投資的士牌照，如今卻要因政府的監管失職而承擔資產貶值的惡果，這對業界極其不公。

現時，政府在未有完善配套的情況下，計劃強行推出一萬個網約車牌照，此舉極度輕率。在目前經濟環境欠佳、整體消費力減弱的市道下，如果市場突然在短時間內湧入一萬輛合規網約車，將會對整個大眾運輸生態造成毀滅性的衝擊。

因此，政府必須慎重考慮以下核心訴求：

嚴格限制在線時間：政府必須對網約車設立嚴格的營運時間限制（控制在線時間）。

保護非繁忙時間生計：在非繁忙時間，市場客量本已供過於求。若不作分流與規管，前線的士司機的收入將會遭到毀滅性打擊，徹底失去維持基本生計的空間。

推行新政必須顧及現存業界的承受能力。本會強烈呼籲有關當局必須三思而後行，切勿輕率推動政策。否則，此舉不僅無法解決交通訴求，反而會徹底激化社會矛盾，打破現有的行業平衡，最終造成不可挽回、極度混亂的社會局面。

彭師曉小姐於2026年6月9日提交的意見書

1. 網約車基本上每一個國家都有，很多時候我們去旅遊也會經常用到的，點對點就到了的確很方便。在香港是一個旅遊之都如果沒有是真的會差一點。有時候語言不通用網約的是非常好，也不感覺自己被人騙了。透明度高。

2. 出一萬個牌其實也不多，現在有很多的士司機也是在積極的做網約車的，其實我覺得是有些人不够積極的態度去工作，帶了很多情緒工作，香港是一福地啊！怎麼可能會沒工作，沒飯食？我覺得現在的人做得太少，想得太多又不懶得做，個個都想依賴政府，其實努力一點，萬事都有可能的達到的。現在有很多地方都請人啊，但是有很多都是想出現金的，不供強積金的，感覺現在的人都不知道怎麼想的！過份的好就變成養懶人，這些都是個人意見。

與規管網約車服務有關的4項附屬法例小組委員會

鄭豪賢於2026年6月9日提交的意見書

一個國家同一個城市有冇進步，就係睇吓佢有冇決心去改變，網約車正正就係反映一個城市有冇進步，當知道網約車發牌一萬個及條件非常奇怪，完全違反顛覆網約車嘅優勝之處，同的士有咩分別？

例如頭尾玻璃要貼網約車適應嘅標誌，就係呢樣嘢已經反映得很奇怪，時代嘅轉變係可以睇好多書去知道，好多財經雜誌正正反映點解香港冇人願意搭的士，因為的士錯漏百出其實都唔使介紹，一個經濟學家講唔想搭的士嘅人越嚟越多嘅因素就係唔想俾人知自己搭緊的士個趨勢係去到醜，所以轉搭網約車而你們標籤網約車即係本末倒置，希望特區政府審慎考慮，專注嚟用家這方面考慮。謝謝

LEBRUN Paul於2026年6月9日提交的意見書

The Government needs to understand that we, the commoners, are 100% fed up with traditional taxis. They have been the monopoly for point-to-point transportation service for a very long time; they have been left unchallenged and poorly managed. My personal experience with traditional taxis is equally poor. Old and poorly maintained cars, the rancid smell, the 5-6 mobile phone blocking the windscreen, the texting and driving, hire refusals, cash only (yes some drivers still refuse e-paymetn although it is the Law), unsafe drivers (speeding, falling asleep, too old to drive, don't care about other road users, poor driving technique, poor driving attitude!!!), and did I mention HIRE REFUSAL? You can't blame them; they have no incentive to improve, none whatsoever. They were left unchallenged. You, as our government, must change this. More competition means better and cheaper service - simple as that. Rise hail services are great, no guesswork and stand in the heat waiting for a taxi, plus so many other benefits. You might not have taken a taxi in a while because you probably have drivers, I encourage you to take traditional taxis exclusively for 1 month, then you'll know.

DREVER Mathew先生於2026年6月9日提交的意見書

As a Hong Kong resident I enjoy one of the most affordable and convenient taxi systems in the world in a city where it is difficult to own a car. Please don't put a limit on the number of taxi's as it would make them harder to find and increase the prices.

My wife and I use the taxi system if we're working a lot of overtime or work beyond our last bus, and it's really important for the taxi ride to be affordable. Please don't change that.

麥汝成先生於2026年6月9日提交的意見書

我個人覺得以什麼角度去看待網約車合法化的正確方案, 應該以用家和賴以為生的工作者出發, 並不是單就車主的利益為大前提。兩者都是服務香港每日上班上學和外來的遊客出行提供服務! 如果的士和網約車可以並行提供服務! 而的士與網約車兩幫司機其實可以互相替保, 亦即是士有較好的經營條件時, 網約車司機可以去揸的士, 相返的士司機亦可參加網約行列! 能做到這個靈活性大概都可以解決謀生司機營業需求。再想, 假使網約車一萬個名額只得3000個在街上行走其餘七千個只係兼職而不提供服務試問一個國際城市外國人用慣的系統一下子用不上這不是一個荒天下之大謬嗎? 我知道政府對每一個行業都有責任去保護因為香港嘅經濟同市民嘅就業係息息相關, 但係買入的士牌照投資, 呢啲係個人意願. 舉例我97年買咗一間住所但在03年下跌, 我把住所都出售並虧損很多, 這個政府也願意為我埋單嗎? 認清楚工作崗位需要保護, 投資帶來的損失, 不應該受到保護! 政府應該活化這個行業並不是向其中一方打壓這才是黃道!

楊肇民先生於2026年6月9日提交的意見書

本人認為，政府現行規管方案過於保守，與國家及全球積極發展數字經濟、共享經濟的潮流背道而馳：落後於時代潮流：內地及全球網約車早已全面普及，成為市民出行常態。香港若實施嚴格總量管控及「人車綁定」，無異於削足適履，令智慧城市發展倒退。扼殺兼職與閒置運力：共享經濟的核心在於善用社會閒置資源。政府強推全職化規管，剝奪了市民工餘兼職賺取收入的彈性，也無法有效應對惡劣天氣或節假日的出行高峰。強烈敦促政府順應科技與時代進步，放寬限制，還市民現代化的出行選擇。

與規管網約車服務有關的4項附屬法例小組委員會

MOHAMMAD Muzamil於2026年6月9日提交的意見書

I do ****not support**** the proposal's strict quota of ****10,000 vehicle permits for all ride-hailing services****, and I have serious concerns about the way it would be implemented and governed.

First, a hard cap of 10,000 permits is too blunt an instrument for a market that needs to respond to real, changing demand. Ride-hailing demand is not static: it varies by time of day, day of week, major events, weather, public transit disruptions, and seasonal shifts. When supply is capped permanently, the system will struggle to match those fluctuations. That mismatch typically shows up as longer wait times, reduced availability in higher-demand areas, and higher prices for riders—regardless of whether the quota is justified as “balancing supply.” Instead of encouraging efficient service, the quota risks creating avoidable congestion in the streets and at pickup points, as drivers and riders compete for limited capacity.

Second, limiting permits across ****all ride-hailing services**** can unintentionally discourage innovation and competition. Even if the intent is to control congestion or emissions, a strict cap can push companies to compete less on service quality and more on compliance strategies and lobbying for favorable outcomes in the allocation process. That matters because ride-hailing has the potential to improve last-mile connectivity and reduce some private car usage. If the policy environment punishes expansion through a fixed quota, the sector may stagnate—especially in neighborhoods that are underserved or where service declines as soon as capacity becomes tight.

Third, the proposal's ****lottery-based allocation mechanism**** is not an effective or fair way to allocate a scarce public-interest resource. A lottery is random and does not reward entities that can demonstrate better safety records, labor protections, vehicle quality, training standards, or measurable compliance with emissions requirements. In practice, randomness can place well-equipped and responsible

operators at the same starting line as operators that are less prepared to meet long-term obligations. This could lower the overall standard of service and compliance, because the selection process does not reflect performance or readiness.

A lottery can also create perverse incentives. Companies and applicants may focus on gaming the system rather than investing in improvements that benefit the public. For example, applicants might structure their operations around winning the lottery rather than building stable networks, reducing dead miles, or improving accessibility. Over time, the city could end up with a permit pool that is formal but not operationally optimal—meaning fewer gains in safety, sustainability, or rider experience than the policy claims to deliver.

Fourth, the proposal relies on a ****dynamic adjustment mechanism**** to respond to conditions, but combining a strict cap with periodic adjustment still risks undermining the purpose of flexibility. If the city has the ability to adjust based on demand and congestion indicators, then the fixed quota is unnecessary—or at least should be substantially higher with a responsive framework that can tighten supply only when evidence supports it. Otherwise, the city may still be constrained by the initial “ceiling,” even when data shows that additional permits could reduce street congestion by preventing long waits and reducing roaming behavior where drivers search inefficiently for riders.

Moreover, dynamic adjustment mechanisms can be difficult to design in ways that are transparent and predictable to the industry and riders. If adjustment rules are opaque or politically influenced, participants may face uncertainty and instability. Instability can reduce investment in driver recruitment, vehicle upgrades, accessibility features, and service coverage in lower-income areas. This undermines the public interest goal because it can harm exactly the communities that rely most on reliable ride-hailing service when public transit is limited.

Fifth, the quota may shift problems rather than solve them. When permits are constrained, riders who cannot easily find an available vehicle may resort to alternatives such as unregulated rides, illegal pick-ups, or other forms of risky transportation. That can weaken enforcement outcomes, reduce rider safety, and

make it harder for the city to monitor service quality. Additionally, permit constraints can lead to more “dead time” and “dead miles” as drivers reposition to find demand—potentially increasing emissions rather than reducing them.

In summary, I do not support the **10,000 permit cap** because it is overly rigid, risks harming competition and service coverage, uses a **lottery** that does not prioritize safety or performance, and may not achieve better congestion or environmental outcomes once real-world behavior is considered. If the city’s goals are congestion reduction, safety improvement, and emissions control, those objectives can be pursued with more targeted measures—such as performance-based licensing, stronger enforcement of vehicle standards, congestion pricing strategies, real-time permit rebalancing, and incentives for lower-emission fleets—without imposing a fixed ceiling that constrains the entire market regardless of conditions.

李志成先生於2026年6月9日提交的意見書

希望網約車牌照數目沒有上限，因為全職兼職司機數目不只一萬個，且繁忙時間或地點偏遠，現有的士數量不足應付。

加上引入競爭可以提升服務質素，及為乘客帶來更有吸引力的收費。

與規管網約車服務有關的4項附屬法例小組委員會

陳市民先生於2026年6月9日提交的意見書

本人身為長期依賴點對點交通出行的香港市民，現就政府計劃規管網約車平台及牌照數量的政策，提交以下意見。

一、傳統的士服務滯後，難以滿足市民期望多年來，香港傳統的士的服務質素一直為人詬病。「拒載」、「揀客」、「兜路」以及「態度惡劣」等行業亂象屢見不鮮。尤其在惡劣天氣、繁忙時間或偏遠地區，市民往往面臨「有車不願載」或被無理加價的困境。部分傳統的士車廂衛生欠佳，且拒絕接受電子支付，嚴重脫離香港作為國際金融及智慧城市形象。

二、網約車（Uber）具備透明、優質與現代化的絕對優勢相較之下，以Uber為代表的網約車平台透過科技手段，徹底解決了上述痛點：定價透明：乘客在行程開始前已知曉確切車資，免除被「濫收車資」的疑慮。電子支付：支援多種無現金支付方式，迎合本地市民與海外旅客的消費習慣。雙向評價機制：平台設有機制約束司機行為，車廂普遍乾淨，司機禮貌且樂意配合導航，出行體驗高下立判。三、促請放寬發牌上限，保障市民出行選擇權政府早前考慮將網約車車輛許可證數量限制在約 10,000 至 15,000 個，本人對此深表憂慮。若發牌數量顯著低於市民與旅客的實質出行需求，不僅會導致尖峰時段叫車成功率大幅下跌，更會推高車費，最終懲罰的。行政長官曾強調點對點交通政策「必須站在人民一邊」。唯有透過引進健康的市場競爭，給予網約車合法且充足的發展空間，才能倒逼傳統的士行業進行真正的服務改革。懇請政府傾聽主流民意，重審並調高網約車許可證上限，保障廣大市民靈活出行的基本權利。一名期望交通進步的香港市民

與規管網約車服務有關的4項附屬法例小組委員會

張英才先生於2026年6月9日提交的意見書

我不支持對網約車進行規管，「全港僅設 10,000 個配額上限、採抽籤分配、並以動態調整機制」的做法，我表示保留甚至擔憂。原因很簡單：這種設計很可能先行把供應限制在一個固定天花板，令未來需求增加時仍無法及時補足，最終反映到乘車時間更長、價格更高，並削弱市民的出行選擇。

網約車本質上是即時配對服務，需求會因時間、地點、天氣與大型活動而急劇波動。若總量被硬性鎖定在 10,000 上限，即使市場上有更多符合規定的司機與車輛，也未必能有效加入服務，供需之間就更容易出現短期缺口。當缺口出現，最直接受影響的是乘客：候車時間延長、配對成功率下降、在繁忙或偏遠地區更難叫到車。這些影響並不抽象，而是每天都會發生的體驗問題。

至於用抽籤分配配額，雖然在程序上被視為「公平」，但抽籤未必能公平地分配資源到真正需要的地區與時段。結果可能造成服務在某些時候與空間「供不應求」：乘客等得更久、成本更高，轉而尋找替代方案或被迫接受較差服務。當供應偏緊時，價格上升的壓力也會更大，尤其在公共交通較不便或需求突增時更明顯。

我亦關注「動態調整機制」能否有效對沖上述風險。若動態調整只是形式上的機制，缺乏清晰指標、調整頻率與透明度，就難以在需求明顯上升時迅速增加供應。更合理的做法，是以可量化的乘客體驗指標作為調整依據，例如平均候車時間、接駁成功率、取消率與尖峰缺口，並確保調整能快速、可預期地執行，而不是拖延或被上限因素過度限制。

因此，我希望當局在審視配額上限與分配方式時，能把「可達性」和「乘客體驗」置於首位，而不只是考慮管理成本。若要維持配額制度，至少應確保配額不會在早期就成為供應瓶頸；抽籤不應是唯一工具，亦應讓配額與服務表現或地區需求有更密切關聯；動態調整機制則要具體、透明，並能快速反應市場變化。否則，立法規管本應帶來更安全、更可靠的出行選擇，卻可能因供應受限而讓體驗變差。

我誠摯提出上述意見，請在制定附屬法例時更充分考慮乘客的實際需要，讓網約車在香港既能被妥善規管，也能真正做到「用得上、等得起、叫得到、收費更可接受」。

與規管網約車服務有關的4項附屬法例小組委員會

黎玉女士於2026年6月9日提交的意見書

毋須設定網約車輛許可證配額上限

與規管網約車服務有關的4項附屬法例小組委員會

HASSAN Ali先生於2026年6月9日提交的意見書

In my opinion, regulating ride-hailing services is a very good measure taken by the HKSAR Government.

However, there few things i disagree or have an opinion about.

Breakdown:

1: Most of uber drivers work part-time rather than full-time so limiting the permit quota to 10,000 will be quite unfair as there are more than 30,000 uber drivers both full-time and part-time. The gap is huge. If there are no filters, part time drivers can be the first ones to get the permit whereas those who have only uber as their sole income might have to find another job. Therefore, my suggestion is that the quota shall be increased by atleast double and priority should be given to full-time drivers. While I agree that permit for everyone is also not a good solution; government can come up with a better strategy without making uber drivers nervous that they may end up losing their job.

2: The permit fees should be very well structured as an ordinary uber driver can't pay in thousands for a permit thats lasts 5 years.The HKSAR can come up with a better solution/plan regarding the permit fee.

3: Uber like in other countries or regions should be fully functional at all times and not just peak hours. Hong Kong has one of the best transportation network and there are many people who take different mode of transport. As a tourist landmark, uber has high potential to run full time like any other taxi in Hong Kong. Gig economy in Hong Kong has increased year on year and many choose to work in gig economy due to unemployment. Thus, treating uber as a normal work type is important and not limiting the hours of operation.

4:There is no hard feeling towards any taxi driver as all of them are trying to earn a

living; but most of them are above the age of 65 and at that age one is not so trustworthy on the road. Most of the road accidents are linked with taxi drivers while some are fatal whereas there are rare cases regarding uber drivers and most of them are very professional when working

This is merely a suggestion regarding ride-hailing service and I respect the steps taken by the HKSAR Government while legalising ride-hailing services.

與規管網約車服務有關的4項附屬法例小組委員會

AUSTIN Keith於2026年6月9日提交的意見書

This submission is formally lodged to express my strong objection to the proposed legislation aiming to cap ride-hailing licences at 10,000 via a ballot system. While regulation is necessary to ensure safety and quality standards, the implementation of an arbitrary numerical cap and a lottery-based allocation system will severely damage Hong Kong's transport ecosystem. This policy will create acute transport shortages, diminish service quality, harm the local economy, and severely undermine Hong Kong's reputation as a world-class, tech-forward tourism hub. The proposed 10,000 licence cap fails to account for the actual daily commuting demands of Hong Kong's seven million residents. Artificially restricting the supply of ride-hailing vehicles will lead to chronic deficits during peak hours, inclement weather, and in underserved districts, such as parts of the New Territories and Kowloon East. Residents will face prolonged wait times and exorbitant surge pricing. Furthermore, ride-hailing is not a luxury but a vital utility for families with young children, the elderly, and persons with disabilities who find traditional public transport or standard taxis physically challenging to navigate. Capping these services directly reduces their mobility and quality of life. Allocating licences via a ballot system treats a vital public service like a lottery. It completely ignores operator merit, vehicle quality, and driver experience, allowing luck rather than market demand or service capability to dictate who operates. As Hong Kong actively positions itself to attract high-spending international and mega-event tourists, transport accessibility remains a critical pillar of the visitor experience. International travelers and visitors from the Mainland expect seamless, app-based mobility solutions. They are accustomed to the reliability of digital ride-hailing platforms that eliminate language barriers, offer transparent cashless pricing, and provide GPS-tracked safety. Forcing tourists arriving at Hong Kong International Airport, the West Kowloon High-Speed Rail Station, or cruise terminals into lengthy, frustrating queues due to a shortage of ride-hailing vehicles sends a damaging message. It signals that Hong Kong is structurally unequipped to handle modern travel preferences and damages the city's first impression. Restricting digital transport solutions directly contradicts the Government's own

Smart City Blueprint and paints Hong Kong as a regressive market that protects legacy monopolies at the expense of technological innovation and consumer convenience. A ballot system also introduces severe market distortions that undermine local economic health. Much like the current taxi licence premium system, an arbitrary cap invites speculative behavior where licence winners may choose to rent out their credentials rather than operate them, driving up costs for drivers and passengers alike. Additionally, the flexible, gig-economy nature of ride-hailing provides vital supplementary income for thousands of local drivers. A rigid ballot eliminates this flexibility and forces part-time drivers out of the market entirely, hurting local livelihoods. Instead of a restrictive cap and ballot system, the Legislative Council should consider a progressive regulatory framework. Licences should be issued based on strict vehicle safety standards, driver background checks, and service ratings rather than a lottery. If a cap must exist, it should be dynamically adjusted using real-time transport data to match actual commuter and tourist demand. The government should encourage healthy competition by deregulating certain aspects of the traditional taxi industry alongside legalizing ride-hailing, thereby raising the bar for point-to-point transport across the board. An arbitrary 10,000 licence cap allocated by ballot is a blunt instrument that will yield net-negative outcomes for Hong Kong. It will penalize local commuters, alienate international tourists, and stymie the city's economic evolution. I urge the Legislative Council to reject this proposal and instead pursue a smart, open, and demand-driven regulatory approach that safeguards consumer choice and maintains Hong Kong's status as a premier global destination.

CHAN Joyce於2026年6月9日提交的意見書

Limiting the vehicles available makes consumer less likely to use ride hailing at all, which would also affect taxi drivers since there is less demand.

與規管網約車服務有關的4項附屬法例小組委員會

李婉容女士於2026年6月9日提交的意見書

我不理解立法當局希望以配額與抽籤方式來管理網約車數量，若全港以附屬法例建議的方式，將網約車許可證設為「僅 10,000 個上限」並採抽籤分配，且配合「動態調整機制」，存在明顯風險：它可能在供應未充分應對需求變化時，先行把整個市場車輛供應上限固定下來，結果不但影響乘車體驗，也可能推高價格並降低選擇。

我最擔心的是，配額上限會直接限制未來車輛供應的彈性。網約車需求本就會隨時間與地點波動，例如繁忙時段、節假日、天氣突變或大型活動後，需求往往瞬間上升。在這種情況下，如果車輛總量被固定在 10,000 的上限，即使有新的合資格營運者或司機加入，也可能因配額不足而進不來，導致可用車輛不足、配對時間延長，令乘客的等待成本增加。

其次，抽籤方式分配配額即使在形式上公平，也不等於能有效反映市場需求與服務品質。抽籤結果可能令部分年份或地區出現供需錯配：有些時間與區域車隊不足，乘客就需要等待；有些時段車輛過剩，又可能導致營運壓力轉嫁到消費端。當供應偏緊時，價格上升的風險會更高，尤其在夜間或交通接駁較弱的情況下，乘客對可替代方案的選擇亦更少。

我亦希望「動態調整機制」能在概念上落實得更清楚、更可預期。若機制只停留在文字描述，而缺乏透明的調整指標、時程與上調上限，便難以真正緩解配額過緊帶來的問題。動態調整應能以可量化的指標運作，例如平均候車時間、接單成功率、取消率、尖峰需求缺口等，並在需求出現壓力時能快速增加供應，而不是多年才調整一次。

因此，我認為在考慮配額時，應把乘客體驗與可達性放在核心位置，而非單靠一刀切的上限與抽籤。若一定要設定配額，至少應確保：配額上限不會過早成為供應瓶頸；抽籤能與服務表現或地區需求掛鉤；以及動態調整機制具透明度、可量化指標、快速反應能力。否則，網約車本應帶來的效率與便利，反而會因供應受限而被削弱。

我的立場是：請在制度設計上優先保障乘客能更快配對、更合理收費與更多出行選擇，同時確保規管能達到安全與責任可追溯的目的。請讓配額與分配機制真正做到「以需求與服務表現為導向」，而不是先限制供應、再寄望後續調整能補救。我的聲音希望能被納入考慮，讓香港的網約車服務未來更貼近市民需要。

TSANG Edward先生於2026年6月9日提交的意見書

本人歡迎正式接受網約車作為載客的方法，與國際、國內接軌，避免令香港成為落後地區。

但是次所批的數量過少，令人失望！觀乎全國、以至全世界，透過網上預約，提供點對點載客才是最新大趨勢。有限的服務、非國際品牌平台，只會進一步削弱香港吸引外地旅客的能力。

政府宜當機立斷，一步到位，避免拖泥帶水，吃力不討好。

與規管網約車服務有關的4項附屬法例小組委員會

BIRD Daniel先生於2026年6月9日提交的意見書

Ride-hailing services in Hong Kong are absolutely essential. I have lived in Hong Kong for over twenty years and seen a gradual decrease in the quality of public taxis. Drivers are often rude, they have a poor manner, and often drive recklessly. On many occasions they refuse fares or to travel directly to destinations they do not wish to. Since the introduction of ride-hailing apps in Hong Kong I've received better service, safer driving, and more convenience that should suit a modern city like Hong Kong. Such services offer a much needed transparency, particularly for non-locals. By giving taxi drivers the opportunity to participate in schemes with ride-hailing apps they will be required to drive better. The app also overcomes issues with translation as many Hong Kong taxi drivers do not speak English. A modern city like Hong Kong must remain competitive. Whenever I travel to other countries I rely on such apps to ensure safe travel for myself and my family. I know who the driver is and that they're connected to a system that helps guarantee safety. Reducing the number of drivers available is a poor decision that desperately needs reconsideration from public consultation.

與規管網約車服務有關的4項附屬法例小組委員會

余家輝先生於2026年6月9日提交的意見書

As a regular Uber passenger in Hong Kong, I'm deeply disappointed by the government's decision to limit ride-hailing drivers to just 10,000—a quota that Uber itself warns will severely hurt service reliability and affordability. According to Uber's official estimation, if the quota is capped at this level (or even at 15,000), four out of every 10 ride requests during peak hours could fail, passenger waiting times will double, and fares could surge by as much as 70%. With more than 30,000 drivers currently earning flexible income on Uber's platform, this quota would immediately cut active drivers by over 50%, creating a massive supply shock. Rather than imposing an arbitrary cap that harms passengers and drivers alike, the quota should not exist at all—ride-hailing supply should be controlled by the market, where demand naturally determines how many drivers join, ensuring reliable service, fair prices, and sustainable earning opportunities for everyone.

與規管網約車服務有關的4項附屬法例小組委員會

TSANG C於2026年6月9日提交的意見書

To whom it may concern,

I hope this message finds you well. I am writing to express my concerns regarding the current state of taxi services and the importance of ride-hailing platforms like Uber, which I have been using for over a decade. Uber's arrival was nothing short of a lifesaver for many of us.

Frankly, it is impossible for the government to be unaware of the persistent issues with taxi services—such as poor driver attitudes, selective picking of passengers, and outright refusal of service. These problems are particularly glaring on Fridays when hailing a taxi becomes an ordeal, as most drivers turn off their meters to cherry-pick passengers. On Saturday afternoons, when families like mine want to go out together, the situation is even worse. While six-seater taxis do exist, they are exceedingly rare. Have you ever tried booking one? It's nearly impossible without paying an additional \$80 on top of the metered fare.

Why should ordinary citizens be left at the mercy of such practices? A typical private car can only accommodate four passengers, which means a family of four plus a domestic helper has no choice but to rely on Uber. Otherwise, we are forced to pay exorbitant surcharges just to get a taxi—an unreasonable and often futile effort.

Beyond that, I must ask: why restrict ride-hailing platforms to a mere 10,000 licences? Is the intention to push even Uber into a situation where drivers start cherry-picking passengers and citizens are forced to pay inflated fares? That would defeat the very purpose of having an alternative in the first place.

Moreover, Uber's point-to-point service has been incredibly helpful for working professionals like myself who need to arrange transport for elderly parents. Sometimes my parents may not know the exact address, but with Uber, I can book

the ride for them directly—whether it is for a medical follow-up or simply getting them where they need to go. The same goes for sending our domestic helper with the children to tutoring classes; it is a simple and convenient solution that taxis simply cannot reliably provide.

In fact, since Uber became available, I have hardly driven my own car at all. This has effectively reduced the number of vehicles on the road. Isn't that one of the benefits the government should be encouraging?

The question remains: does the government truly aim to improve transportation, or does it tacitly allow taxi cartels to exploit citizens in genuine need?

I urge the relevant authorities to seriously address these issues and create a fairer, more reliable transportation system for all.

Thank you for your attention, and I look forward to hearing your thoughts.

Best regards,

Ms Tsang

網約車輛許可證配額不應設有上限，如果真的要設有上限，網約車配額數量應該要跟的士牌照配額相若，以提供公共競爭的環境，由市場決定孰優孰劣

與規管網約車服務有關的4項附屬法例小組委員會

TSOI Siu-yam於2026年6月9日提交的意見書

1. Executive Summary As a daily commuter and a member of the general public, I welcome the Government's move to formalize a regulatory framework for point-to-point ride-hailing services. However, the ultimate success of this legislation depends entirely on how the Road Traffic (Limit on Number of Ride-hailing Vehicle Permits) Notice (L.N. 63 of 2026) is implemented. I urge the Subcommittee to advocate for an open, market-driven quota system rather than a restrictive cap. Restricting ride-hailing permits shields the traditional taxi industry from healthy competition. It harms the public interest. Keeping ride-hailing accessible will raise service quality, expand transport capacity, and build a world-class smart city.

2. Enhancing Service Quality Through Market Competition For years, Hong Kong passengers have voiced frustrations over point-to-point transport services. Common complaints include refused rides, cherry-picking passengers during peak hours, and poor driver attitudes. The entry of ride-hailing platforms like Uber introduced long-overdue accountability to the market: Two-Way Rating Systems: Drivers and passengers rate each other. This creates a self-regulating incentive for courteous and safe behavior. Upfront Pricing and Digital Routing: Pre-calculated fares and GPS routing eliminate overcharging and arbitrary detours. Cashless Transactions: Digital payments offer a seamless, secure, and modern alternative to traditional cash transactions. Shielding standard taxis from this competition removes their incentive to innovate or improve. Embracing ride-hailing platforms forces the entire point-to-point transport sector to elevate its standards. The consumer wins.

3. Boosting Transport Quantity and Meeting Peak Demand Hong Kong's public transport system is highly efficient, but it faces severe capacity strains during peak windows. During heavy rainstorms, Friday rush hours, or late-night periods after trains stop running, finding a standard taxi is notoriously difficult. An artificial cap on ride-hailing permits will replicate the exact supply bottlenecks that plague the traditional taxi system. Mainstreaming ride-hailing platforms offers crucial structural advantages: Dynamic Supply Matching: Ride-hailing relies on flexible, part-time, and full-time drivers who enter the market exactly when demand spikes. Geographic Coverage: Ride-hailing algorithms

efficiently dispatch vehicles to underserved areas outside core commercial districts.

Relieving Mass Transit Pressure: A robust ride-hailing fleet provides a reliable backup network, easing pressure on the MTR and bus networks during disruptions.

4. Protecting the Livelihoods of Flexible Workers The ride-hailing economy supports thousands of drivers who rely on platforms for flexible income. Many drivers are self-employed individuals, parents, or part-time workers balancing multiple responsibilities. Imposing an overly restrictive permit cap will destroy these flexible livelihood opportunities. It risks driving the service underground or forcing drivers out of work entirely. A fair and inclusive permit system protects these workers, brings them into a legal framework, and ensures they contribute positively to Hong Kong's economy.

5. Recommendations for the Subcommittee To ensure the subsidiary legislation serves the public interest, I request the Subcommittee to consider the following recommendations:

Maximize the Permit Quota (L.N. 63 of 2026): Set the initial limit on Ride-hailing Vehicle Permits high enough to absorb the existing pool of active, highly-rated drivers. Do not artificially choke the market.

Implement an Automated, Data-Driven Quota Review: Do not rely on static caps. The Transport and Logistics Bureau should use real-time platform data (such as wait times and unfulfilled ride requests) to adjust permit numbers dynamically based on public demand.

Streamline the Permit Process: Ensure that the permit application fees and bureaucratic requirements outlined in L.N. 61 of 2026 are reasonable. They should not act as a barrier to entry for individual, everyday drivers.

6. Conclusion Hong Kong aims to be a leading international financial center and a champion of smart city technology. A restrictive approach to ride-hailing contradicts these ambitions. By keeping ride-hailing licenses widely accessible, the Government will foster a competitive environment that naturally improves public transport quality and quantity. I urge the Subcommittee to prioritize passenger choice, commuter convenience, and market innovation when vetting these pieces of subsidiary legislation.
